

EXCEPTIONAL CUSTOMER EXPERIENCE
at Every **TOUCHPOINT**

Introduction

Welcome to the CVM Enterprise Administration and Configuration Guide. This document provides the essential information needed to effectively set up, manage, and maintain your Customer Visit Management (CVM) system.

Overview of CVM & CEM

SEDCO's Customer Experience Management (CEM) solutions offer innovative technologies designed to deliver a consistent and convenient journey for your customers across all points of contact. A key component of this suite is Customer Visit Management (CVM) Enterprise.

Figure Intro 1-CEM Branch Experience

CVM Enterprise is a powerful solution for managing and controlling the entire customer visit cycle within your physical locations. From the moment a customer arrives until they depart, CVM orchestrates their interaction with self-service or teller-assisted services. It intelligently manages customer flow using first-come-first-served principles or sophisticated priority rules based on customer type, requested service, and other defined attributes.

Beyond managing queues, CVM Enterprise provides comprehensive tracking of customer and employee actions. This data fuels insightful reports and dashboards, enabling performance management of your branches and staff and helping you strategically plan future resource allocation. By leveraging automation, CVM aims to streamline operations, reduce customer effort, minimize costs, and ultimately enhance profitability and customer satisfaction.

About This Manual

- **Purpose:** This manual serves as the primary technical reference for administrators responsible for configuring and managing the CVM Enterprise system.
- **Audience:** This guide is intended for system administrators, IT personnel, and designated managers who have the necessary permissions to access and modify CVM settings. A basic understanding of your organization's operational structure and services is assumed.
- **Organization:** To improve navigation and clarity in this comprehensive guide, the content has been restructured into logical chapters focusing on key administrative domains:
 - o **Chapter 1: Branch Setup and Management:** Covers creating and managing physical locations and their components.
 - o **Chapter 2: Service and Queue Configuration:** Details setting up services, organizing them, and defining queue behavior.
 - o **Chapter 3: User, Role, and Permission Management:** Focuses on managing system access and permissions.
 - o **Chapter 4: System-Wide Configuration:** Addresses global settings affecting the entire CVM environment.
 - o **Chapter 5: Customer Identification and Attributes:** Explains how to configure methods for identifying customers and managing their data.
 - o **Chapter 6: Ticketing Workflow Configuration:** Guides you through customizing the customer's ticketing experience.
 - o **Chapter 7: Custom Activities:** Covers configuring specific break and work types.
 - o **Chapter 8: Digital Signage Management:** Covers setting up and managing content players and presentations.
 - o **Chapter 9: Advertisement Management:** Details configuring and targeting advertisements across channels.
 - o **Chapter 10: Notifications and Alerts:** Explains how to set up system alerts (Technical, Queuing, and Feedback-related) and notification mechanisms.
 - o **Chapter 11: Feedback Management:** Focuses on configuring feedback questions for customers and employees.
 - o **Chapter 12: Auditing:** Details viewing and managing audit logs.
 - o **Appendix:** Contains supplementary information like supported environments and a quick task reference.

Definitions

The following terms are used throughout this manual with specific meanings:

- **Customer:** Any person seeking services through the CVM System (e.g., bank client, patient, citizen).

- **Service:** Any task, transaction, or assistance provided to a Customer by an individual or system within your organization (e.g., cash deposit, consultation, information request).
- **Branch:** A distinct physical location or logical business unit where services are offered (e.g., main office, retail store, service center).

CVM Core Concepts

Understanding these fundamental entities and their relationships is key to configuring CVM effectively:

- **Branches, Counters, and Halls:** A **Branch** is the main location. Within a branch, **Counters** are specific points where **Users** serve **Customers**. **Halls** can be used to logically group counters within a branch.
- **Services and Service Groups:** Customers visit a branch to receive **Services**. Services can be organized into **Service Groups** for easier management and presentation on ticketing interfaces.
- **Users and Roles:** **Users** are the employees who interact with the CVM system (e.g., serving customers, managing branches). Their capabilities are defined by assigned **Roles**, which bundle specific **Permissions**.
- **Queues:** CVM manages the flow of customers waiting for services primarily through **Queues**. Queue behavior is influenced by service priorities, segments, and configurations.
- **Segments:** Customers can be categorized into **Segments** (e.g., VIP, Standard), often based on identification. Segments can influence service priority or workflow.
- **Configurations (Branch/Service):** These objects store detailed settings that control how branches operate (e.g., general queuing rules) and how specific services behave (e.g., target service times).
- **Calendars:** Define the working hours and holidays for branches or specific services, controlling their availability.

Instructional Icons

Look for these icons throughout the manual for quick guidance:

-  : Indicates a situation presenting a condition that might cause a problem or requires caution.
- ► : Cross-reference hyperlinks to related information on other pages (in digital formats).
