

Self-Service Kiosk Software

Core Module Manual — Administration & Configuration

PROJECT TYPE	Enterprise Software — User & Administration Manual
ROLE	Sole Technical Writer
SCOPE	100+ page module manual, maintained across multiple release versions
TOOLS	Microsoft Word · Snagit

WHAT I DID

- Served as the sole author of the administration and configuration manual for an enterprise self-service kiosk management platform.
- Wrote comprehensive documentation covering dashboards, reports, portal navigation, and system administration workflows.
- Documented the portal UI in detail — describing interface elements, navigation menus, and key functions clearly for non-technical administrators.
- Maintained the manual across multiple product release cycles, tracking new features and updating relevant sections with each version.
- Wrote release-aligned New Updates sections to help administrators quickly locate changes relevant to their version.
- Balanced technical accuracy with plain-language clarity, targeting administrators who manage kiosk networks across multiple locations.

Result: Delivered a clear, maintainable manual used by administrators managing self-service kiosk networks at enterprise client sites. The structured approach to UI documentation reduced onboarding time and support queries from new system administrators.

The following pages are an excerpt from the manual, covering the product overview, portal navigation guide, and UI reference table. Product and company names have been generalised for public portfolio use.

OVERVIEW

About This Manual

Self-service kiosks offer a flexible and convenient way to extend your organisation's service offerings and reach customers beyond the constraints of traditional office hours and locations. By providing access to services 24/7, you can enhance the customer experience and increase satisfaction.

This manual serves as a comprehensive guide, walking administrators through every configuration step of the Self-Service Core Module — including dashboards, reports, and system administration. With this guide, you will be able to streamline operations and optimise the performance of your self-service kiosk network.

Getting Started — Logging In

To begin using the administration portal, open the portal URL in your browser and enter your assigned username and password on the login screen.

Login Screen

The login screen displays two input fields: **Username** and **Password**. Enter your credentials and click **Login** to proceed. A *Forgot Password* link is available below the login button for password recovery.

Figure 1 — Login screen layout

On your first login, the system will prompt you to reset your password. Enter your current password and your new password, confirm the new password, then click **Reset**. Passwords must be at least ten characters long and include at least one uppercase letter and one special character.

PORTAL INTERFACE

Getting to Know the Administration Portal

After logging in, the administration portal home page is displayed. The interface is divided into the following key areas:

Portal Home Page

The home page displays the **Navigation Menu** on the left side, a **Main Display Area** in the centre, and a **Top Bar** along the top containing the home button, notifications icon, and account settings menu. The default landing view shows the **Kiosk Map** — a dashboard displaying all registered kiosks and their current status.

Portal Interface Elements

1	Navigation Menu	The primary navigation panel. All system functions and features are accessible from the sub-menus here. Each dropdown category contains functions essential to the administration and configuration of the self-service system.
2	Main Display Area	The working area of the portal. The contents of whichever menu option is currently selected are displayed here.
3	Home Button	Located in the top bar. Clicking this button returns you to the portal home page from anywhere in the system.
4	Notifications	Located in the top bar. Clicking the notifications icon displays a list of system alerts and popup notifications. Unread notifications are indicated by a counter badge on the icon. Notifications can be read individually or marked all as read.
5	Account Settings	A dropdown menu in the top bar providing access to profile editing, password change, server cache management, and logout.
