DISCLAIMER

The features mentioned in the Release Notes documents have been newly added to the system. They are technically supported in the corresponding version. However, deploying a feature may require additional licenses, hardware, change requests, implementation, or integration costs.

Queuing and Routing

Q Portal Notification – UI Enhancements

Centralized

The notification area inside the Q Portal has been enhanced with a new user interface that offers a cleaner look, enabling users to easily differentiate between the various types of notifications.

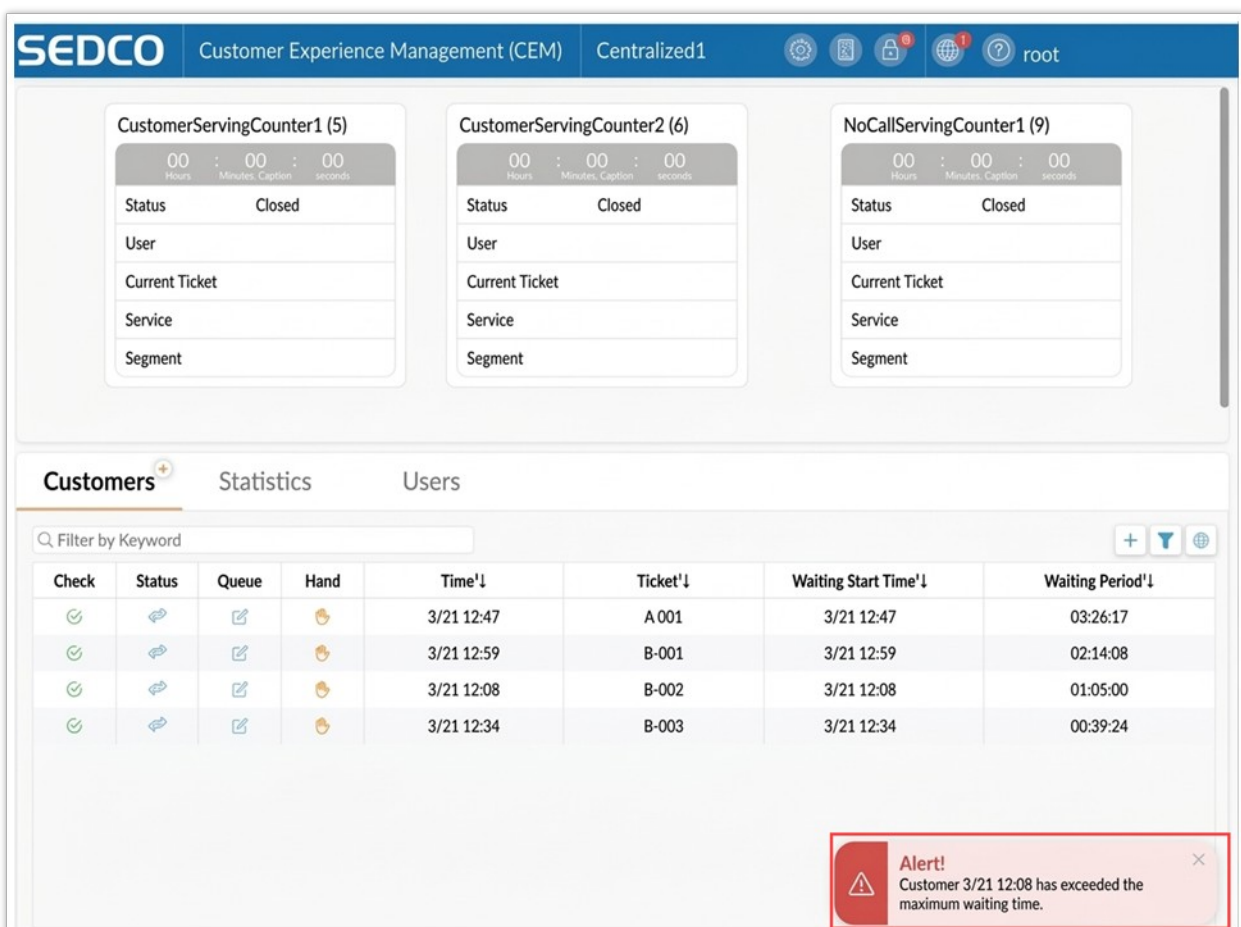

The notification toast has been enhanced with a modern design:

- A colored side strip with an icon.
- A notification type label.
- A clear title and message body.

This replaces the previous plain text layout and makes it immediately clear whether you're looking at an alert, a message, or a system notification.

Each notification type has its own color and icon for quick identification:

- **Alert** – Red strip with exclamation mark icon.
